

i2r Solutions Presentation on the Texegen T-Series “Rod Pumping Unit”

This presentation demonstrates the implementation of i2r Solutions’ patented hydraulic actuator design into a rod pumping application.

The resulting Texegen T-Series design is well suited for conventional applications and offers unique solutions for special applications. Its features address a host of challenges typically found in today’s hydraulic rod pumping unit technologies.

The presentation will illustrate its unique design, with a specific focus on increased reliability, reduced manufacturing costs, minimizing operating costs, and development plans.
